

AI Opportunity Discovery Analysis Report:

Exit Momentum Operations

Exit Momentum's Operations Department stands at a critical inflection point.

While managing dual roles of operational infrastructure and client success functions for 17 client companies representing over \$1 billion in combined revenue, the department currently operates without formal Key Performance Indicators or systematic performance measurement.

Executive Summary

Exit Momentum's Operations Department stands at a critical inflection point. While managing dual roles of operational infrastructure and client success functions for 17 client companies representing over \$1 billion in combined revenue, the department currently operates without formal Key Performance Indicators or systematic performance measurement. The Director of Operations, who has held the role for five years, has developed a proposed list of KPIs, but these remain untracked and unmeasured, creating a fundamental blind spot in operational effectiveness.

The analysis has identified 15 implementable AI opportunity solutions that directly address reported bottlenecks in training systems, session documentation, client data management, and contractor compliance.

The three critical business outcomes identified by leadership:

Lead Generation, Competitive Advantage, and Operational Efficiency

will be directly enhanced through these initiatives. Improved operational efficiency will free capacity for more revenue-generating activities, AI-powered insights will create competitive differentiation in client service delivery, and automated systems will enable the scaling required to support lead generation targets without proportional cost increases.

Current State: Critical Findings

KPI Tracking

The Operations Department currently operates without established Key Performance Indicators, making it impossible to quantify performance or identify improvement opportunities systematically. The Director developed a proposed list of KPIs, including:

1. New client fully onboarded and scheduled within 5 business days of signed agreement
2. 100% of sessions confirmed and calendar invites correct ≥ 45 days out
3. All active assistants complete required training and follow SOPs (tracked quarterly)
4. Pre-session assets delivered 24 hours before session day
5. Post-session assets delivered within 24 hours after every session
6. Invoice accuracy and on-time payments: $<2\%$ invoice errors; 95% of invoices paid within 10 days of issue
7. Birthdays, welcome gifts, milestone gifts delivered before due date (100% on schedule)
8. All new clients correctly configured in Ninety within 7 days of onboarding
9. All event planning milestones hit by due dates
10. Core process completion rate: 100% of onboarding $\rightarrow$ kickoff $\rightarrow$ quarterly $\rightarrow$ annual workflows executed without misses
11. Travel and session logistics accuracy: 98%+ accuracy (room/zoom/travel correct the first time)
12. All inbound lead/prospect communication responded to within 24 hours
13. Less than 7 days from signed agreement $\rightarrow$ scheduled kickoff and onboarding complete

However, these KPIs are not officially tracked or measured. Without performance baselines, there is no measurement of operational efficiency, client satisfaction timing, or process completion rates, preventing data-driven decision-making and systematic improvement.

Time Allocation Analysis

The Director's time is currently estimated to be consumed by:

High-Impact Activities:

**Building and fixing
GoHighLevel automations**

**Scheduling sessions across
multiple stakeholders**

**Creating session notes and
documentation**

**Answering emails and
managing communication**

**Training assistance and
SOP maintenance**

Data Quality Assessment

GoHighLevel

Generally well-maintained due to the Director's extensive automation work, but limited by platform constraints. The Director identifies "GHL limitations" as the main technical obstacle preventing certain desired functionalities.

Ninety.io

Critical data gaps exist because coaches frequently fail to enter session notes. This is the primary data quality issue, as coaches are 1099 contractors rather than employees, creating compliance challenges. The Director notes: "Coaches not entering their session notes" as the specific data quality problem.

Google Drive

Information is scattered without systematic organization. Client preferences, test scores, and assessment results lack a centralized, easily accessible repository, forcing team members to search across multiple platforms and rely on memory for critical client details.

- ❏ **Overall Assessment: Fair to Poor.** The lack of consistent data entry, particularly from contractors, combined with information fragmentation across platforms, creates significant operational friction and prevents comprehensive tracking of client progress and coaching effectiveness.

AI Solutions: Prioritized Implementation Order

The following 15 AI opportunities are sequenced strategically to address technical dependencies, build team buy-in through quick wins, and maximize impact on the three critical business outcomes: **Lead Generation**, **Competitive Advantage**, and **Operational Efficiency**.

AI Opportunity #1: Training System Overhaul

Inadequate Training Resources

The Director identifies "people's lack of knowledge or my lack of training them" as a preventing factor for team efficiency. Despite having created training resources, there's a disconnect in how coaches and assistants understand and implement processes.

Training Non-Compliance

Team members don't consistently review training materials, and when they fail to follow procedures correctly, it disrupts the carefully built automations throughout the system.

Communication Complexity

The Director finds it difficult to articulate GHIL processes and automations to coaches and assistants, believing the systems are "so easy" but struggling to translate that understanding to others. This suggests the complexity isn't being properly documented or communicated.

Process confusion between coaches and assistants increases rework.

Root cause of most downstream issues. Current training gaps and inconsistent compliance undermine every automation and process.

Solution: Custom GPT or ChatGPT Team Workspace Assistant

Upload all training docs and set system instructions like:

"You are Exit Momentum's Training Companion. When asked how to perform a task, answer only using the verified SOPs or checklists."

Team members then ask: *"How do I submit a client agreement?"* or *"What are the travel booking rules?"*

AI gives precise, approved answers. No more guesswork or email back-and-forth.

AI Opportunity #2: Coaches' System Non-Compliance

The primary data quality issue stems from coaches not consistently entering session notes, creating gaps in the record and preventing comprehensive tracking of client progress and coaching effectiveness.

Inconsistent data entry and missed updates erode process reliability. Must be enforced through automation and feedback loops.

Solution

Implement gamification with automated tracking (using GHL + Make.com) that shows compliance leader board and sends personalized completion reminders with AI-generated encouragement.

AI Opportunity #3:

GoHighLevel Constraints

The Director identifies GHL limitations as the main technical obstacle. While the platform provides substantial automation capabilities, it has inherent constraints that prevent certain desired functionalities or process improvements.

Platform limitations restrict automation depth. Needs integration layer expansion to unlock performance gains.

Solution

Use Make.com or Zapier as middleware to extend GHL functionality by connecting to additional AI services and platforms that provide missing capabilities.

AI Opportunity #4: Scattered Client Data

Client preferences, test scores, and other important information lack a centralized, easily accessible repository. This forces team members to search across multiple platforms and memories to find critical client details.

Information fragmentation wastes time and causes service inconsistency.

Solution

Implement AI-powered unified client dashboard using Airtable or Notion with automated data aggregation from all platforms, searchable via natural language queries through AI interface.

Alternative: Use Make.com to create automated data sync workflows that consolidate client preferences, test scores, and notes into a single Ninety.io or Google Drive location with AI-powered search.

AI Opportunities #5 and #6: Approval Delays and Information Architecture

AI Opportunity #5: Head Coach Approval Delays

The Director sometimes must wait for responses from the Head Coach before confirming arrangements or moving forward with processes, creating delays in client-facing operations.

Solution

Set up a daily or weekly 15-minute "rapid-fire decisions" standing meeting specifically for approvals that accumulate during the day or week. The director batches non-urgent items for this meeting.

AI Opportunity #6: Incomplete Information Architecture

Without a structured repository for client preferences and assessment results, institutional knowledge remains in individuals' memories rather than being systematically captured and accessible.

Solution

Build centralized Airtable or Notion database with AI-powered intake forms that automatically categorize and store client preferences, test scores, and notes with natural language search.

AI Opportunity #7: External System Dependencies

While the department has strong internal automation, progress is often dependent on information from Ninety.io, GHL data accuracy, and Google Drive document availability.

Disconnected systems create blind spots and delays.

Solution

Build automated data validation checks using Make.com that verify information completeness across Ninety.io, GHL, and Google Drive, alerting the team when dependencies are missing.

AI Opportunity #8: Inconsistent Contractor Notes

Coaches, who are 1099 contractors rather than employees, frequently fail to enter their session notes into the system. This creates data quality issues and makes it difficult to maintain complete client records and track engagement effectiveness.

Session documentation gaps weaken client continuity and team accountability.

Solution

Automated transcription service (Otter.ai or Fathom) that records sessions, generates transcripts, and auto-populates session summaries into Ninety.io using AI summarization.

Alternative: Use Make.com to create an automated follow-up workflow that sends coaches a pre-filled template via email immediately after each session with a one-click submission button to Ninety.io.

AI Opportunities #9 and #10: Platform Fragmentation and Email Management

1

AI Opportunity #9: Multi-Platform Fragmentation

The department relies on GHL, Google Drive, and Ninety.io, with a stated frustration about "wish they would all be together to limit having to go many places." This platform fragmentation creates inefficiency and increases the cognitive load on staff.

Multiple tools dilute focus and reduce speed.

Solution

Deploy unified workspace dashboard using ClickUp or Notion that embeds views from all platforms with AI-powered universal search across all connected systems.

2

AI Opportunity #10: Email Response Management

Answering emails consumes significant time, likely because questions and requests aren't being systematically prevented or automated through better processes or self-service resources.

Efficiency improvement rather than strategic bottleneck.

Solution

AI email assistant (Superhuman AI or Gmail's Smart Reply) that drafts responses to common queries, with one-click sending for approved responses.

Alternative: Create FAQ knowledge base with AI chatbot integration that automatically responds to routine questions before they reach email, routing only complex issues to the Director.

AI Opportunity #11: Quarterly Checkpoint Follow-Up

The Director consistently struggles with sending quarterly checkpoints to integrators and then remembering to follow up to ensure they actually complete the checkpoints. This represents a gap in the accountability tracking process.

Solution

Automated workflow in GHL or Make.com that sends initial checkpoint requests, then triggers follow-up reminders at 3 days, 7 days, and 10 days if not completed, escalating tone appropriately.

Alternative: Use a project management tool with AI capabilities (Asana or ClickUp) that automatically assigns and tracks checkpoint completion with persistent notifications.

AI Opportunity #12:

Fragmented Historical Context

There's no systematic way to quickly retrieve past conversation context or decisions made during previous sessions, making it difficult to maintain continuity and demonstrate the value of accumulated client knowledge.

Solution

Use ChatGPT Projects to create individual client context repositories that coaches can query before sessions for instant historical summary and key insights.

AI Opportunity #13: AI Implementation Hesitation

The organization expresses concern about putting client financial information and business details "on the web," creating resistance to certain AI solutions that might otherwise improve operations. This privacy sensitivity limits technology adoption options.

The Operations Department serves both Exit Momentum's coaching team and the coaches' clients, creating a complex service model where confidentiality must be maintained at multiple levels.

Solution

Use privacy-focused AI tools with SOC 2 compliance (Claude Pro, ChatGPT Team/Enterprise with data opt-out) that don't train on your data, combined with on-premise LLMs for highly sensitive analysis.

Alternative: Implement data anonymization layer using automated scripts that strip identifying information before AI processing, then reattach after analysis for operational use.

AI Opportunities #14 and #15: Travel Timing and Meeting Management

AI Opportunity #14: Travel Timing Uncertainty

There's ongoing uncertainty about the optimal timing for booking travel whether to book months in advance or closer to session dates which creates inefficiency and potential cost implications. Optimization task post-automation rollout.

Solution

AI-powered travel optimization tool (Hopper or Google Flights price tracking) integrated with calendar. The system analyzes historical booking data and price trends to recommend optimal booking windows.

Alternative: Create a simple rule-based automation in GHL that triggers travel booking reminders at predetermined time frames (e.g., 6 weeks before confirmed sessions).

AI Opportunity #15: One-Off Meeting Management

The department struggles to remember and book Cullen's one-off meetings and to schedule monthly calls with certain contacts. These ad-hoc scheduling needs fall through the cracks amid the complexity of regular session scheduling.

Solution

Use Make.com or Zapier to create a workflow that triggers reminders 7 days before scheduled one-off meetings and auto-generates booking links.

Critical Success Factors

Executive Sponsorship

The success of this AI transformation requires visible, sustained commitment from leadership. Without this top-down commitment, operational initiatives risk being deprioritized amid the demands of client delivery.

Process Foundation

AI amplifies existing processes. It cannot fix fundamentally broken workflows. Before implementing AI solutions, Exit Momentum needs to ensure that underlying processes are sound, clearly documented, and consistently followed. The first AI implementation (Training System Overhaul) directly addresses this by codifying all processes into an AI-accessible knowledge base, creating the foundation for everything that follows.

Integration Focus

These AI solutions are designed to work with Exit Momentum's existing technology stack: GoHighLevel, Ninety.io, and Google Drive rather than requiring wholesale replacement. The middleware approach is intentionally designed to extend current capabilities without disrupting workflows that already function well.

Integration Strategy: Building on Existing Strengths

This integration-first strategy minimizes implementation risk, reduces training burden, and respects the significant automation investment already made in GoHighLevel. It also allows incremental value creation; each AI tool adds capability without requiring mastery of entirely new platforms.

📌 **Key Principle:** These AI solutions enhance rather than replace existing systems, ensuring continuity while unlocking new capabilities.

Conclusion: The Path Forward

Exit Momentum's Operations Department has built a strong foundation through extensive automation in GoHighLevel and systematic process development. The team is talented, the coaching framework is proven, and leadership is committed to excellence. However, the department has reached the limits of what can be achieved through manual effort and conventional automation alone. The absence of formal KPIs, scattered client data, contractor compliance challenges, and scheduling complexity create operational bottlenecks that prevent the company from scaling effectively.

The AI opportunities outlined in this analysis directly address each documented bottleneck with implementable solutions that leverage the existing technology infrastructure.

The executive business coaching industry has been notably slow to adopt AI-driven operational technology. Most competitors still rely on manual coordination, fragmented client data, and reactive problem-solving. This creates a significant window of opportunity for Exit Momentum to establish competitive advantage through operational excellence. **Companies that move decisively now will build 12-24 months of operational lead time that competitors will struggle to overcome.**

The Operations team has demonstrated strong capability with technology and a genuine openness to change. Past challenges with training adoption and contractor compliance are not signs of resistance but rather symptoms of insufficient supporting infrastructure.

The Imperative for Action

The alternative to this transformation is unacceptable. Without systematic operational improvements, Exit Momentum faces persistent underperformance against potential, increasing team pressure as manual processes struggle to scale, eventual staff burnout and attrition, and gradual competitive erosion as more agile competitors deploy superior technology.

Exit Momentum has everything needed for successful AI transformation: talented people who understand operations deeply, proven coaching frameworks that create clear value, committed leadership with budget flexibility, and robust existing technology infrastructure that can be enhanced rather than replaced.

By investing in these AI-driven operational enhancements, Exit Momentum will not only solve current bottlenecks but will establish the infrastructure required to support the company's ambitious growth plans. The three critical business outcomes: **Lead Generation**, **Competitive Advantage**, and **Operational Efficiency** will be directly advanced. Operational capacity freed by AI automation enables more aggressive lead generation without proportional cost increases. This is Exit Momentum's opportunity to redefine operational excellence in business coaching, just as the company has redefined leadership development for its clients. The path forward is clear, the tools are ready, and the impact will be transformative.

Report prepared for: Marki Willis | Director of Operations | Exit Momentum

Report date: November 10, 2025
